### 2-Tier Dynamic Bike Rack

Galvanised

Classic 2-Tier Dynamic Bike Rack is the perfect choice to optimise your bike storage area capacity. These racks achieve increased efficiency through tiered storage and dynamic design. The top tier features gas lift for ease of use, the bottom level is moveable and dynamic, making it the most space efficient storage rack on the market.

#### Features

- Each rack can park a single bicycle on the upper and lower levels for a total of 2 bikes
- To use top tier, simply pull out the sliding base rail until it reaches its pivot point, then fold it down for easy bicycle positioning
- To be spaced at 400mm spacings in accordance with AS2890.3 requirements.
- Product is available in a galvanised finish, or can be powder coated (for an additional cost)
- Ideal for bike storage areas in residential apartments or offices, particularly if trying to achieve a 6 Star Green Rating.

#### Application

Surface mount with base plates. The racks are supported on base plated SHS columns which are simply bolted to existing concrete floor slabs making them suitable for installing in new or retrofit projects. Supplied in knock-down kit form for easy assembly on site.
