EziHold Mounting Frame

Bike Rack Frame for mounting EziHold Square Rack

The EziHold Mounting Frame is a robust steel framework designed to make installing and organising EziHold Square bike racks simple, efficient, and highly adaptable. Rather than fixing racks individually, this system allows EziHold Square racks to be securely mounted to a single frame, creating a neat, consistent, and space-efficient bike storage solution. It is particularly valuable in areas where wall mounting is not possible, while also ensuring compliance with Australian Standard bike spacing requirements.

Features

- Heavy-duty steel construction for strength, durability, and long-term use
- Designed specifically for EziHold Square bike racks for fast, secure attachment
- Allows easy and accurate layout of racks to Australian Standard spacings
- Ideal for freestanding installations where walls are unavailable or unsuitable
- Highly space-efficient, creating a clean, organised bike storage area

Application

Suitable for residential, commercial, and end-of-trip bike storage areas requiring a flexible, compliant, and freestanding mounting solution.

Finish

Powder coating available upon request.

Galvanised

NOTE: EziHold Square bike racks are not included with the EziHold Mounting Frame and must be purchased separately.
